

Experiment -4

Feature selection on a Breast Cancer dataset

Dataset :- Breast Cancer wisconsin Data set -

problem statement :- select the most informative features to predict cancer diagnosis .

Preprocessing :-

loading the data .

from google colab import files

uploaded = files.upload()

file = breast cancer . csv .

importing the data .

import pandas as pd

df = pd.read_csv('breast cancer . csv')

print(df).

Output :-

	id	diagnosis	radius-mean	fractal-dimension
0	842802	M	17.99	0.11890
1	842817	M	20.57	0.08902
2	84300903	M	19.69	0.08158

Tasks:-

(1) Apply Filter method : chi-square test.

Code :-

```
from sklearn.feature_selection import SelectKBest, chi2
from sklearn.preprocessing import MinMaxScaler
Scalar = MinMaxScaler()
X_scaled = Scalar.fit_transform(X)
chi2_selector = SelectKBest(chi2, k=10)
X_chi2 = chi2_selector.fit_transform(X_scaled, y)
selected_chi2 = X.columns[chi2_selector.get_support()]
print("chi-square selected features:", selected_chi2)
```

Output:-

```
chi-square selected features: ['mean radius', 'mean perimeter', 'mean area', 'mean concave points', 'worst radius', 'worst perimeter', 'worst area', 'worst concavity', 'worst concave points'].
```

(2) Apply wrapper method : forward and Backward Selection

Code :-

```
from mlxtend.feature_selection import SequentialFeatureSelector as SFS
```

```
from sklearn.linear_model import LogisticRegression
```

```
lr = LogisticRegression(max_iter=500, solver='liblinear').
```

sfs-forward = sfs(lr, k_features=10,

forward=True,

floating=False,

scoring='accuracy',

cv=5).

LABORATORY CONTINUOUS EVALUATION			
S.No.	PROGRAM	Max.Marks	Marks Scored
1.	Preparedness	5	
2.	Coding	5	
3.	Testing	5	
4.	Viva	5	
	TOTAL	20	

Faculty Signature with Date

sfs-forward = sfs-forward.fit(x_scaled, y)

```
print("Forward selection Features :\n", list(x.columns[list(sfs.forward.k_features-idx)]))
```

sfs.backward = sfs.backward.fit(x_Scaled, y)

```
print("Backward selection Features :\n", list(x.columns[list(sfs.backward.k_feature_idx_)]))
```

Output & Forward selection Features :-

['id', 'smoothness_mean', 'concavity_mean', 'symmetry_mean', 'smoothness_se', 'concavity_se', 'fractal_dimension_se', 'texture_worst', 'perimeter_worst', 'smoothness_worst']

Backward selection Features :-

['concavity_mean', 'concave_points_mean', 'radius_sc', 'texture_se', 'symmetry_se', 'fractal_dimension_se', 'texture_worst', 'area_worst', 'smoothness_worst', 'symmetry_worst'].

(3) Apply Embedded Method: Elastic Net Regularization

code:-

```
from sklearn.preprocessing import StandardScaler  
from sklearn.linear_model import LogisticRegressionCV  
scalar = StandardScaler()  
X_scaled_std = scalar.fit_transform(X)  
elastic_net = LogisticRegressionCV(Cs=10,  
cv=5,  
penalty="elasticnet", l1_ratio=[0.5],  
solver="Saga", max_iter=5000,  
scoring="accuracy")  
elastic_net.fit(X_scaled_std, Y)  
coef = np.mean(np.abs(elastic_net.coef_)), axis=0  
selected_embedded = X.columns[(coef > np.percentile  
coef, 75)].tolist()
```

print("Elastic Net Selected Features:", selected_embedded)

Output:- Elastic Net selected Features:

```
['concave points_mean', 'radius_se', 'radius_worst', 'texture_worst',  
'perimeter_worst', 'area_worst', 'smoothness_worst',  
'concave points_worst'].
```

(4) Evaluate model performance with and without feature selection using logistic Regression.

from sklearn.model_selection import cross_val_score.
